## PRE-TENSIONED CABLE STRUCTURES

- Better Space Utilization
- Better Terrain Adaptability

### Large Span Between Post

Up to 60m Span distance Enable the system to reduce the Post Qty significantly ( 70 Post Per MW ) .

### High Clearance Space

Flexible support structures can achieve greater clearances (Up to 10M) at a lower cost, Specially while using in the Fish Farm, Agriculture farm, Mountain Projects.

### Reduce Steel Materials Consumption

Replacing steel supports with high-strength pre-stressed steel cables reduces the amount of steel required, thereby decreasing the overall steel consumption under similar construction conditions.

### Increase The Generation Output

Improved power generation through height adjustment and terrain adaptability
